DESCRIPTION

A simple 'address book'(دفتر عناوين) application web developed in (.net core Web Api & React). To manage address book entries, with the following features:

- ❖ Add new entry
  - ▪ Full Name
  - ▪ Job Title (Dropdown list)
  - ▪ Department (Dropdown list)
  - ▪ Mobile Number
  - ▪ Date of birth (Please use any date picker widget)
  - ▪ Address
  - ▪ Email
  - ▪ password
  - ▪ Photo
  - ▪ age
- ❖ Edit (Please use popup in (Edit))
- ❖ Delete(Please use alert message (Yes or Cancel))
- ❖ Search with all fields, and range of birth date.
- ❖ Export address book list to Excel File.
- ❖ Manage (Add/Edit/Delete) Jobs and Departments

CONSIDERATION

- ❖ Must be page login full screen in start run project
- ❖ Must be page register full screen
- ❖ Responsiveness is important to support different screen sizes and resolutions.
- ❖ Please allow only valid e-mails and phone numbers.(validations)
- ❖ Don't use Visual Studio scaffolding feature.
- ❖ Use code first to create your database.
- ❖ When you add or edit new we don't want any reload behavior to the page
- ❖ Using (n-tier or onion) architecture would be a plus.

Note:
- Please pack all files in one .zip file named after your name and assignment name (example yourname_addressbook.zip) or upload to github
- You can publish output in (free) https://www.smarterasp.net/secured_signup?plantype=&affiliate=&dealcode=
- Tools used in the development (visual studio - vscode and SQL Server)
